

New Version 6

Company Name

ID - 3 Barcode - 2002
Cable Accessories

Do you issue tools and equipment
to your employees?
Then who knows who's got what?

TOOL *Trakka*

Check-out and check-in your tools and equipment in a flash

ToolTrakka V6 barcode based check out and check in of tools, equipment and consumables

ToolTrakka's intelligent barcoding technology means that you are no longer tied to your computer when logging plant and equipment in, or out. The battery operated scanner can be taken out into the workshop, depot or store and can be used to record the movements of multiple items. When you return to your computer you simply plug the scanner in and upload the transactions recorded. ToolTrakka intelligently handles the transactions based on the status quo. This means that your computer no longer has to be located close to the point of stores issue.

Product Features

- Manages your moveable assets (tools, plant, equipment etc).
- Issue assets to employees, to jobs, into containers (eg vehicles, work boxes etc) or to contractors.
- Issue containers to employees, jobs or to contractors.
- Records the date and time of check-out and check-in for apportioning hire costs to jobs
- Issue consumables to jobs, employees or to contractors.
- Available with intelligent barcoding option or as software only
- Battery operated barcode reader handles multiple transactions in the field
- Prints barcodes for standard actions, jobs, containers and contractors
- Rugged metal barcode labels are available for tough environments
- Wide range of reports to keep you informed
- Barcode audit facility for on-site checking of assets

The problem with issuing company owned tools or equipment to employees is that it is very difficult to keep track of them and thus many tend to go astray. Since you probably have quite a large investment in such tools and equipment this can represent a considerable cost at the bottom line. Tool Trakka solves all these problems and saves you money.

Tool Trakka records when and to whom all items are issued. When you suddenly need to find a specific item Tool Trakka gives you its location in an instant. When you need to know what items are at any location just view or print a status report. Or, with ToolTrakka's new audit facility you can just scan all the items at a location and ToolTrakka will report missing and mislocated items.

You can assign a rental rate to each item. ToolTrakka records the time out and time returned of each item on each location. A report then provides a detailed analysis of the 'hire costs' to allow you to apportion imputed costs to jobs, employees or contractors.

ToolTrakka's consumables management system allows you to issue consumables to jobs, employees, contractors or into containers. Any items returned at job completion can be returned to the store. At any time you can report total issues (less returns) to any location by unit and by value for costing purposes.

Of course, in addition to managing equipment issues, ToolTrakka can still help you manage the issue, and track the

cost, of work clothing.

ToolTrakka is simply the easiest to use, fastest and most comprehensive way to manage your moveable assets.

System Requirements: IBM PC or compatible, Windows 9x, Win2000, XP 32MB RAM, 38MB free HDD, Network optional
